

# Frances Andrew

## Site Furnishings Ltd

### GENERAL INFORMATION

#### Installation

*All Frances Andrew products should be installed in accordance with local building codes.*

Open box marked "Tools & Instructions Enclosed" first. It should be conveniently located on the top of the shipment.

For furnishings that require assembly, loosely assemble site furniture without tightening bolts. Check that the product is square, level and plumb to architect's specifications.

Firmly tighten all metal connections. Tighten wood connections until flush nut is flush with wood.

***All connections should be checked for tightness two weeks after installation.***

**NOTE:** please forward this notice, installation detail, and special tools to the owner or agent thereof. We thank you for your interest in Frances Andrew Site Furnishings' quality products.

#### Maintenance

*Frances Andrew products are designed to be relatively maintenance free. However, site furniture should be periodically inspected to ensure public safety.*

**Wood:** minor surface damage and/or graffiti can be removed with the use of an abrasive pad such as 3M Scotch Brite. The wood will naturally weather to a silvery-grey colour over time.

Although not required, the application of a Teak Oil sealer can restore the wood to a more youthful appearance. Teak Oil sealers are available at most Hardware shops.

**Metal:** gouges or nicks in the paint should be touched up immediately with an exterior quality urethane. Consult your local paint manufacturers for more information.

For cases of extreme vandalism, replacement parts are available if required. Please contact our office for more details.
